

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually a tool constructed out of high quality materials designed to endure the most demanding procedures and work environments. This particular piece of equipment could enable the individual driving to work the blades hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the entire load or the arms so as to facilitate more precise carrying and position in a faster and much more effective manner.

The fork pocket is somewhat unique and enables the individual operating it to securely swing the forks into position without any worry of damaging the positioning cylinders. This can allow the operator the alternative to perform simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be transformed into fork positioners on available units.
